

Mystic Lore Studio

Editorial Collection Builder

Product Requirements Document (PRD) v1.0

Product Design Philosophy

Every garment has a story. Editorial Collections exist to tell it beautifully. The feature transforms research, sketches, fabrics, patternmaking, revisions, photography, and reflection into an immersive editorial presentation.

1. Overview

Editorial Collections are cinematic storytelling experiences for fashion designers. They support fashion campaigns, portfolios, client presentations, design journals, technical storytelling, and personal archives.

Vision

Blend the feeling of a luxury fashion editorial, an Apple keynote, an interactive museum exhibit, and a premium coffee-table book.

Success Criteria

Designers can build polished editorial presentations entirely inside Mystic Lore Studio without external layout software.

2. Navigation

Project > Editorial Collections.

3. Collection Library

Poster-based library with cover artwork, metadata, search, filters, and actions. Templates include Fashion Editorial, Collection Lookbook, Design Journey, Technical Presentation, Campaign, Client Presentation, and Blank Collection.

4. Collection Creation

Choose template, name, subtitle, cover image, accent color, typography theme, then create.

5. Information Architecture

Project > Editorial Collection > Metadata, Theme, Settings, Scenes > Blocks > Content.

6. Scene Philosophy

Scenes represent cinematic moments instead of pages. Examples include Hero Reveal, Moodboard, Fabric Story, Construction, Editorial Photography, and Reflection.

7. Scene Types

Hero, Story, Gallery, Comparison, Moodboard, Fabric Story, Construction, Technical, Credits, and Closing.

8. Block System

Reusable blocks: Hero Image, Heading, Paragraph, Quote, Gallery, Divider, Spacer, Button, Video, Sketch, Technical Drawing, Timeline, Fabric Swatch, Color Palette, Measurement Table, Pattern Diagram, and Callout.

9. Themes

Themes define typography, spacing, colors, shadows, transitions, textures, and motion globally.

10. Reader Experience

Opening animation, immersive presentation, and multiple viewing modes: Editorial, Book, Presentation, and Auto Play.

11. Motion Principles

Elegant transitions including cross fades, page slides, book turns, zooms, paper reveals, light sweeps, and parallax.

12. Responsive Design

Desktop editing, touch-first iPad experience, and mobile viewing with light editing.

13. Future AI Features

Generate editorial drafts, captions, designer statements, scene suggestions, moodboards, layouts, and storytelling recommendations.

Guiding Principle

The builder should enable anyone to create luxury-quality editorial presentations with minimal effort.

Future Direction

Replace a traditional slide builder with a Narrative Engine that guides designers through storytelling frameworks while remaining flexible.
